

RANSOMWARE PREVENTION CHECKLIST:

- Strong Endpoint Detection and Response - detect the anomalies
- Security Awareness Training - educate users
- Backup - isolate data from normal IT operations
- Patch Management - if you can integrate it into your vulnerability program, even better!
- Vulnerability Management - continuous evaluation of your infrastructure
- NextGen SIEM (MXDR)- if you can't correlate your entire stack, you will miss something
- Identity - password less is coming - are you ready?
- Admin - remove admin rights from everyone - use privilege solutions
- Email Security - can you remove this as a threat - cloud computing will help!
- NextGen Firewalls - inspect outbound traffic for anomalies
- Zero Trust Remote Access - explicit permissions vs. open access
- Network Detection and Response - east west visibility for on-prem security concerns

WE CAN MANAGE YOUR CYBERSECURITY TODAY!
